

ABRUPT TUNING VARACTORS

ASI, AT series of Abrupt PN-Junction Tuning Varactors utilize the lowest resistance & highest Q characteristics of optimized tuning circuit performance. Applications include both narrow and wideband frequency tuning through 12GHz. These devices are designed so the capacitance-voltage relationship closely approximates Square Law ($n = 0.5$).

ABSOLUTE MAXIMUM RATINGS:

Storage Temperature:
-65°C to +175°C

$$C_T = C_P + C_J = C_P + \frac{C_{J0}}{(1 - V_{BIAS})^n}$$

C_T = TOTAL CAPACITANCE

C_P = PACKAGE CAPACITANCE

C_{J0} = JUNCTION CAPACITANCE AT ZERO BIAS

V_{BIAS} = APPLIED REVERSE VOLTAGE

θ = CONTACT POTENTIAL OF THE DIODE (0.6 - 0.8 VOLTS)

n = SLOPE OF DIODE C-V CURVE (0.5 FOR ABRUPT JUNCTION)

These diodes are suitable for Transistor, Gunn and Impatt Voltage Controlled Oscillators; AFC Loops and Amplifiers; Tunable Filters; and Linear Frequency and Phase Modulators

All of the abrupt tuning varactors meet or exceed the military environmental specifications of MIL-S-19500, MIL-STD-202 and methods from MIL-STD-750 that specify mechanical, electrical, thermal and environmental tests.

TYPICAL JUNCTION CAPACITANCE VS REVERSE BIAS

NOTES:

1. Total capacitance is measured at 1 MHz and -4 volts on a Boonton capacitance meter. Standard tolerance ± 10%.

2. Quality factor is calculated at -4 volts and 50 MHz, using values of R_S obtained at 1.0GHz and C_{J-4} measured at 1MHz and the following equation:
 $Q_{-4V} = 1/2\pi f R_S C_{J-4}$

3. Package style 51 is the standard package for this series of tuning varactors. These diodes are also available in the following package styles: 01, 10, 11, 15 (DO-7), 20, 21, 31, 83, 84. When ordering, specify package designation as a suffix to type number.

4. Capacitance temperature coefficient: 300ppm/°C max. at -4 Volts. Calculated from the following equation: $TC = [C_T(+85^\circ C) - C_T(-65^\circ C)] / 10^6 / (85+65)C_T(25^\circ C)$ average between -65°C and +85°C and is expressed in parts per million per degree centigrade (ppm/°C).

5. Tuning ratio includes all capacitances, junction, package and all internal fringing capacitance (C_T=C_J+C_P), from 0 volts to the rated breakdown voltage.
